Dan Hansen **Christensen Associates Energy Consulting**

Dan Hansen works in a variety of areas related to retail and wholesale pricing in electricity and natural gas markets. He uses statistical models to forecast energy sales and demand, estimate customer load response to changing prices, and estimate customer preferences for product attributes. Dan has conducted evaluations and provided testimony regarding revenue decoupling and weather adjustment mechanisms. He has developed and priced new product options, evaluated existing pricing programs, evaluated the risks associated with individual products and product portfolios, and developed cost-of-service studies. His research has been published in

Industrial and Labor Relations Review, the Journal of Labor Economics, and The Electricity Journal. Dan received his PhD from Michigan State University.
