

MICHAEL CW KINTNER-MEYER

Pacific Northwest National Laboratory

Michael Kintner-Meyer is a Staff Scientist with PNNL and has 21 years of energy/economics/environment system analysis and modeling experience. As an engineer by training, he has managed U.S. and international teams on numerous system modeling activities. Michael has been intimately involved in the technical aspects of system modeling including electric capacity expansion planning, optimal electric generation dispatch under security and emissions constraints, renewable energy resource assessments, integration of renewable technology into the grid, distribution system planning and automation, and residential, commercial and transportation demand modeling.

After completing training and a degree in Germany, Michael received his PhD in mechanical engineering from the University of Washington.
