

MARIA LAUCK

Power System Engineering

Maria Lauck is the grants practice manager with Power System Engineering in the automation and communication group. As a mechanical engineer with nearly 2 decades of utility experience and a passion for working in the industry, Maria looks forward to helping clients obtain funding for essential projects that are needed to serve their residential and business customers. She knows that by leveraging technology, she can help member-driven utilities and their communities thrive and prosper. She is a seasoned manager with a passion for efficiency in the utility space whose focus is to maximize an organization's potential. She has a multi-disciplined background in generation, finance, logistics, and academia, allowing for successful project execution while leading with a servant-leadership approach which helps employees find fulfillment and purpose in their work. Maria earned an MBA and BA in finance from Clarke University (Iowa) and a BS in mechanical engineering from Florida International University at Miami. She received an Executive Scholar Certificate in organizational leadership from Northwestern University's Kellogg School of Management. She serves on several non-profit education and workforce boards in southwest Wisconsin.
