

## **GREG MEYER**

### **Madison Gas and Electric**

Greg Meyer is a Professional Engineer with nearly four decades of experience in the gas and electric utility sector. He is Madison Gas and Electric's (MGE) director of electric engineering in energy operations. Greg embarked on his career as an engineering intern with MGE in 1986. Over the years, he has ascended through various managerial and directorial positions across five key operational and engineering areas within the company. Greg boasts a proven track record of steering high-performing teams to deliver quality service within budgetary constraints and on schedule. His enthusiasm for teamwork and innovation is evident, underscored by his commitment to fostering a diverse and inclusive work environment. Most recently in his tenure, Greg has held instrumental leadership roles in the implementation of cutting-edge initiatives, including a state-of-the-art distribution operations center, the first advanced distribution management system in North America, a state-of-the-art geospatial information system, a top-level grid modernization program, and an electric system reliability ranking which is consistently in the top 3 nationally. Additionally, he has championed teams and processes that consistently achieve high customer service rankings. In his current capacity, he is dedicated to guiding his team of over 50 electrical engineering colleagues and business partners, aligning their efforts with MGE's overarching goals of superior safety, customer service, reliability, affordability, and resiliency. Greg received a bachelor's degree in electrical engineering from the University of Wisconsin-Platteville.
