

ADITI VERMA

University of Michigan

Aditi Verma is an assistant professor with the University of Michigan's (UM) Nuclear Engineering & Radiological Sciences (NERS) program. Aditi joined NERS in Fall 2021 as an assistant research scientist, becoming an assistant professor in Fall 2022. She is a faculty associate with UM's Fastest Path to Zero Initiative team and a visiting scholar with the Harvard University Kennedy School's Belfer Center for Science and International Affairs' project "Managing the Atom". She is a former Stanton

Nuclear Security Postdoctoral Fellow at the Belfer Center where she was jointly appointed to Belfer's "Managing the Atom" project and Belfer's International Security Program. Prior to her appointment at Harvard, she worked at the Organisation for Economic Co-operation and Development's Nuclear Energy Agency (NEA) in Paris where her work, endorsed and funded by policymakers from the NEA member countries, focused on bringing epistemologies from the humanities and social sciences to academic and practitioner nuclear engineering, thus broadening their epistemic core and helping nuclear engineers grapple with the ethical, moral, social, economic, and policy challenges created by the development and use of nuclear technologies. At the NEA, Aditi also led the establishment of the Global Forum on Nuclear Education, Science, Technology, and Policy. Aditi previously worked at the International Atomic Energy Agency, Framatome (formerly Areva), and the Center for the Study of Science, Technology and Policy. She received an SB and a PhD in nuclear science and engineering from the Massachusetts Institute of Technology (MIT). While at MIT, she was a Burchard Scholar and a Kelly-Douglas Fellow.
